MASTER INDEX

A journal devoted to the physics and chemistry of interfaces

Editor:
Charles B. Duke, Webster, NY

Regional Editors:
George Comsa, Germany; Shinji Kawaji, Japan; Richard M. Lambert, UK

Master Index to Volumes 251–260

SUSCA MI 251–260, 1–150 (1992)

North-Holland

FOUNDING EDITOR: Harry C. Gatos

ADVISORY EDITORIAL BOARD

EDITORIAL ADDRESSES:

Editor:
Dr. Charles B. Duke, Xerox Webster Research Center, 800 Phillips Road, Bldg. 0114-38D, Webster, NY 14580, USA
Telefax: +1-716-265-5080

Regional Editors:
Professor George Comsa, Institut für Grenzflächenforschung und Vakuumphysik der KFA Jülich, Postfach 1913, D-5170 Jülich 1, Germany
Telefax: +49-2461-58627

Professor Shinji Kawaji, Department of Physics, Gakushuin University, 1-5-1 Mejiro, Toshima-Ku, Tokyo 171, Japan
Telefax: +81-3-5391-1513

Dr. Richard M. Lambert, Department of Chemistry, University of Cambridge, Lensfield Road, Cambridge CB2 1EP, UK
Telefax: +44-223-336362; Electronic mail: RML1@UK.AC.CAM.PHX

All correspondence with the publisher regarding manuscripts accepted for publication should be addressed to:
Surface Science Technical Editors, P.O. Box 103, 1000 AC Amsterdam, The Netherlands
Telephone: +31-20-5862 526; Telefax: +31-20-5862 775.

Please do not use telefax or electronic mail for the transmission of manuscripts.

Detailed information on submission and preparation of manuscripts may be found in the Instructions for Authors on page 3 of the cover.

Surface Science is published in semi-monthly issues. For 1992, 18 volumes have been announced. The subscription price for these volumes is Dfl. 7560.00 (US$ 4128). Postage and handling amount to Dfl. 558.00 (US$ 305). Therefore the total price is Dfl. 8118.00 (US$ 4433). The price for a combined subscription to the 1992 volumes of Surface Science, Applied Surface Science and Surface Science Reports is Dfl. 10287.00 (US$ 5617), including postage and handling. The Dutch guilder prices are definitive; the currency equivalents are for your guidance only.
Subscriptions should be sent to the publisher, Elsevier Science Publishers B.V., Journals Department, P.O. Box 211, 1000 AE Amsterdam, or to any subscription agent or bookseller. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge.
Books for review should be sent to Dr. C.B. Duke

Special regulations for authors – Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.
Submission to this journal of an article entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S. 351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.
Special regulations for readers in the USA – This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US$ 2.25, also payable through the Center. (N.B. For review journals this fee is US$ 0.20 per copy per page.) This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein. Although all advertising material is expected to conform to ethical standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality or value of such product or of the claims made of it by its manufacturer.

This issue is printed on acid-free paper.

AUDIENCE:
Physicists and Chemists Specialized in Surfaces, Interfaces, Clusters and Atoms

Photoemission and Absorption Spectroscopy of Solids and Interfaces with Synchrotron Radiation

by **M. Campagna** *and* **R. Rosei**

Enrico Fermi International School of Physics, Volume 108

1990 xiv + 488 pages
Price: US $ 128.00 / Dfl. 250.00
Subscr. price: US $ 109.00 / Dfl. 212.50
ISBN 0-444-88470-X

At a time when new extremely powerful third-generation synchrotron radiation sources are being planned and built, this volume presents a timely overview of the present status of synchrotron radiation research and includes the background fundamental theoretical aspects of electronic structure of condensed matter and of condensed-matter interaction with photons.

Liquids at Interfaces

edited by **J. Charvolin, J.F. Joanny** *and* **J. Zinn-Justin**

Les Houches Summer School Proceedings, Volume 48

1990 xxxvi + 644 pages
Price: US $ 179.50 / Dfl. 350.00
Subscr. price: US $ 152.50 / Dfl. 297.50
ISBN 0-444-88450-5

This school was concerned with surface properties of liquids at solid/liquid, liquid/liquid, gas/liquid interfaces. Renewal of interest in these domains belonging to classical physicochemistry appeared rather recently. This was motivated by the industrial importance of phenomena such as wetting of solids by liquids, interactions between colloidal particles, anchoring of liquid crystals, stabilization of liquid/liquid interfaces by amphiphilic molecules, and kinetics of foam.

The Modern Physics of Phonons: Transport, Surfaces and Simulations

edited by **G.K. Horton** *and* **A.A. Maradudin**

Dynamical Properties of Solids, 6

1990 viii + 518 pages
Price: US $ 197.50 / Dfl. 385.00
ISBN 0-444-88561-7

The latest volume in this series covers the progress made in research on transport phenomena and on the dynamics of surfaces and on realistic simulations. Both theory and experiment have made tremendous strides since this field was reviewed and computer power has increased by several orders of magnitude. The volume comprises new, authoritative and comprehensive reviews on new developments and their fundamental aspects by leading researchers in the field.

Handbook on Synchrotron Radiation, Volume 3

edited by **G.S. Brown** *and* **D.E. Moncton**

1991 xiv + 724 pages
Price: US $ 200.00 / Dfl. 390.00
ISBN 0-444-87422-4

The aim of volume 3 of the Handbook on Synchrotron Radiation, is to demonstrate the power and sophistication of experimental methods used to conduct synchrotron radiation research at wavelengths comparable to the interatomic spacing in condensed matter. As a result of the substantial body of research performed at high-energy electron storage rings, a great deal about optimising the design of storage rings for synchrotron radiation production has been learned. The methods for generating high-intensity X-ray beams using insertion devices and for manipulating and monochromatizing them, have matured. The experimental research techniques, foreshadowed by the early research performed parasitically on high-energy physics machines, have evolved dramatically and entirely new opportunities have been exploited. The emphasis in this volume is placed on scattering techniques, particularly those influenced heavily by synchrotron radiation. Also thoroughly reviewed is the important application of X-ray microanalysis.

The Chemical Physics of Atomic and Molecular Clusters

edited by **G. Scoles**

Enrico Fermi International School of Physics, Volume 107

1990 xviii + 818 pages
Price: US $ 200.00 / Dfl. 390.00
Subscr. price: US $ 170.00 / Dfl. 331.50
ISBN 0-444-88331-2

This volume of the Enrico Fermi Summer School proceedings is concerned with the chemical physics of atomic and molecular clusters of medium and large size which are defined as clusters too large to yield rotationally resolved spectra. In practice this means from trimers and tetramers up. By limiting the field a separation is made between the study of systems of well-known structures (for which the position of each of their fragments is well known) from systems that, because of their dynamical or "fluid" status or because of the too large number of components, have to be studied with methods which are intrinsically more statistic.

Modern Problems in Condensed Matter Sciences, Volume 29

Nonlinear Surface Electromagnetic Phenomena

edited by **H.-E. Ponath** *and* **G.I. Stegeman**

1991 xvi + 654 pages
Price: US $ 143.50 / Dfl. 280.00

ISBN 0-444-88359-2
Subscription price: US $ 122.00 / Dfl. 238.00

In recent years the physics of electromagnetic surface phenomena has developed rapidly, evolving into technologies for communications and industry, such as fiber and integrated optics. The variety of phenomena based on electromagnetism at surfaces is rich and this book was written with the aim of summarizing the available knowledge in selected areas of the field.

The book contains reviews written by solid state and optical physicists on the nonlinear interaction of electromagnetic waves at and with surfaces and films. Both the physical phenomena and some potential applications are dealt with in this essential contribution to the modern optics literature.

Contents: Preface to the series. Preface. 1. Second-order nonlinear guided wave interactions *(W. Sohler)*. 2. Third-order nonlinear electromagnetic TE and TM guided waves *(A.D. Boardman, P. Egan, F. Lederer, U. Langbein and D. Mihalache)*. 3. The problem of stability and excitation of nonlinear suface waves *(N.N. Akhmediev)*. 4. Nonlinear waves and switching effects at nonlinear interfaces *(A.E. Kaplan, P.W. Smith and W.J. Tomlinson)*. 5. Second-order nonlinear optical effects at surfaces and interfaces *(T.F. Heinz)*. 6. Nonlinear surface magnetoplasma polaritons in semiconductors *(V. Ambrazeviciene, R. Brazis and A. Kungèlis)*. 7. Light scattering from phonons and spin waves on surfaces *(F. Nizzoli and D.L. Mills)*. 8. Surface magnetic and structural phase transitions *(M.I.Kaganov, A.P. Levanyuk, S.A. Minyukov and A.V. Chubukov)*. 9. Laser-induced surface gratings *(A.M. Prokhorov et al.)*. 10. Laser-induced surface polaritons and optical breakdown *(A.M. Bonch-Bruevich and M.N. Libenson)*. Author index. Subject index. Cumulative index.

INSTRUCTIONS FOR AUTHORS

Contributions must be written in English. **They should be submitted in triplicate with original drawings of the figures** (no larger than ca. 20 × 30 cm) and an abstract in English. All manuscripts other than Letters, originating in the Federal Republic of Germany and Austria, should be submitted to the Regional Editor in Germany. All manuscripts, other than Letters, originating in European Countries, other than those mentioned above, as well as those originating in Africa, should be submitted to the Regional Editor in the UK. All manuscripts, other than Letters, originating in Japan, should be submitted to the Regional Editor in Japan. All manuscripts originating in North and South America, in Asia (except Japan), in Australia or New Zealand, should be submitted to the Editor.

All Surface Science Letters regardless of country of origin, should be submitted directly to the Editor.

The authors are encouraged to list the names (and addresses) of three to four individuals who are qualified to serve as referees for their paper. The proposed referees should preferably (but not necessarily) reside in the same country or continent as the editor or regional editor to whom the paper is submitted. The referees selected will not necessarily be from the list suggested by the author. The submission of a paper will be taken to imply that the author has satisfied himself that no copyright will thereby be infringed. Upon acceptance of an article by this journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Rapid publication: To qualify for rapid publication in **Surface Science Letters** manuscripts should not exceed 2000 words in length, excluding the abstract, list of references and a maximum of 5 tables or figures which will be counted as seperate.

Page charge and reprints: There is no page charge. Reprints may be ordered from the publisher. An order form will be sent to contributors together with the proofs. 25 reprints of the article will be supplied free of charge.

Preparation of manuscripts

Manuscripts should be typed throughout with double line spacing and wide margins on numbered pages.

The *title page(s)* should contain, in addition to the article title, author(s)' names and affiliations, the text of related footnotes and the text of the abstract. Indicate which author will act as contact author and provide FAX No., telephone No. and telex No., if available.

Tables should be typed on separate sheets at the end of the manuscript. In addition to its serial number, each table should have a sufficiently detailed heading or caption to explain the data displayed in it.

Figures should be numbered and their captions listed together at the end of the manuscript.

References in the text to other publications should be numbered consecutively within square brackets, for example: "... and Chang and Weaver [1] show..." and listed together at the end of the text, for example:

[1] S.-C. Chang and M.J. Weaver, Surf. Sci. 241 (1991) 11.
[2] S.J. Hoekje and G.B. Hoflund, Appl. Surf. Sci. 47 (1991) 43.
[3] F.J. Himpsel, Surf. Sci. Rep. 12 (1990) 1.
[4] A. Roth, Vacuum Technology, 3rd ed. (North-Holland, Amsterdam, 1990).
[5] V. Celli, in: Dynamical Properties of Solids, Vol. 6, Eds. G.K. Horton and A.A. Maradudin (North-Holland, Amsterdam, 1990) p. 337.

References to unpublished or not readily accessible reports should be avoided. In the case of multiple authorship all authors should be listed in the references provided they number less than ten. Only in the case of more than ten authors is the first author et al. acceptable.

Formulae in the manuscript should be typed with particular consideration given to characters that may be misinterpreted, e.g.

I (cap.), l (el), 1 (one), ′ (prime)	c, C; k, K, κ (kappa); p, P, ρ (rho)
o (lower case), O (cap.), 0 (zero), ° (deg)	u, v (lower case), ν (nu), V (cap.)
× (times), x (lower case), X (cap.)	Σ (sigma), $\sum$ (sum); Π (pi), $\prod$ (product); etc.

If necessary, unusual symbols should be explained in pencil in the margin.

Vectors should be indicated by a wavy underlining, and will be printed in bold-face italics.

Preparation of figures

The publisher requires a set of good quality drawings and photographs to produce the printed line figures and half-tone plates in the journal. Photographic copies ("glossy prints") of drawings are also acceptable for the line figures if they have been sharply focused and evenly exposed. **As a rule, Xerox copies cannot be accepted.** Original drawings and photographs will be returned after publication of the paper.

Line figures: The drawings or glossy prints supplied for the line figures should be 1.5–3 times larger than the printed size of the figures and should contain all the required, carefully applied lettering.

Figures are preferably reduced to a single column width (7.6 cm) unless their complexity, large width-to-height ratio, or need to display special detail makes a larger format necessary (max. printed width ~ 20 cm). Inappropriately sized lettering on a figure may prevent its reduction to the size optimum for its information content. The lettering used on a drawing should be chosen so that after reduction, the height of numbers and (capital) letters falls within the range 1.2–2.4 mm. Care should be exercised in choosing the pen width of machine-plotted graphs. Frequently lines in these figures are too fine compared to the area of the figure.

Shaded areas in line figures should be shown by means of cross-hatching (or a matrix of dots) rather than a continuous grey "wash". Cross-hatching, after reduction, of density less than ~ 25 lines/cm is satisfactory.

Half-tone plates: The photographs supplied for reproduction should be unmounted unless they form part of a composite figure and they should have a somewhat greater contrast than is desired in the printed figure. It is important that the photographs supplied are not already screened (overprinted with the point-matrix used by printers) or moiré patterns will form when they are screened for a second time. When necessary, the top side of a photograph should be marked on the back. A reduction factor should be recommended for a photo when it is not obvious what detail in the photo is of interest.

Colour plates: Illustrations can be printed in colour when they are judged by the Editor to be essential to the presentation. The Publisher and the Author will each bear part of the extra costs involved. Further information concerning colour illustrations and the costs to the author can be obtained from the Publisher.
